Spektrum/JR remote satellite can be directly connected to pin board of MICROBEAST PLUS (Spektrum Adapter not required anymore); see manual for further information. Added separate trim values for aileron, elevator, collective and rudder. Removed "User defined" presets instead you can directly edit a value with StudioX/StudioXm if necessary.

Microbeast PLUS - Download - ALIGN

Before the first flight MICROBEAST PLUS has to be adjusted to your helicopter mechanics and its components. This is done in Setup menu level. When MICROBEAST PLUS shows that the system is ready, press and hold the button down. The Menu-LED next to menu point A will begin to flash and then after a while will be steady on. Now and only now you ...

Please read the instruction manual thoroughly before the first use of your MICROBEAST PLUS and setup the system carefully according to this manual. Allow sufficient time for the setup procedure and check each step carefully. Watch for a mechanically clean and proper build of your helicopter.

Introduction - BEASTX Wiki

Anyhow, it is not recommended to set the pitch range of MICROBEAST PLUS asymmetrical to -4 to +12 degrees for example, as this would not represent the helicopters capability. Better is to set the endpoints to -12 and +12 degrees and later use the pitch curve setting in your transmitter to adjust the lower end to your preferred flying style.
