The Laplace transform of f(t), that it is denoted by f(t) or F(s) is defined by the equation. whenever the improper integral converges. Standard notation: Where the notation is clear, we will use an upper case letter to indicate the Laplace transform, e.g. L(f; s) = F(s). The Laplace transform we defined is sometimes called the one-sided Laplace transform.

Let x, y ∈ R such that f(x) = f(y) 3-4x = 3-4xy-4x = -4y x = y Therefore, f is one – one. For any real number (y) in R, there exists (3-y)/4 in R such that f [(3-y)/4] = 3-(4 (3-y)/4) = y Therefore, f is onto. Hence, f is bijective. (ii) f: R → R is defined as f(x) = 1 + x 2 Let x, y ∈ R such that f(x) = f(y) 1+ x 2 = 1 + y 2 ⇒ x = ± y
